Restriction to one of the following inventions is required under 35 U.S.C. § 121:

I. Claims 1-4 and 13, drawn to a compound, classified in Class 564, subclass 321.

II. Claim 5, drawn to an antibody produced in response to a compound, classified in

Class 436, subclass 547.

III. Claims 6-12, drawn to monoclonal antibodies specific for efavirenz, classified in

Class 530, subclass 388.9.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-III, related each to the other, are independent and distinct inventions

differing in design, performance, structure, mode of operation, function, and effect. The

antibodies of groups II or III do not have the structure of the compounds of group I and do not

require the compounds as claimed for use. The antibodies of group II are not required to be

monoclonal or to bind to the same antigen as the antibodies of group III.

Because these inventions are distinct for the reasons given above and have acquired a

separate status in the art because of their recognized divergent subject matter as shown by their

different classification, and the searches required for the different Groups are not co-extensive,

restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an

election of the invention to be examined even though the requirement be traversed.

Art Unit: 1641

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application.
